

COVID-19 Infection Prevention and Control Training Resource for Childcare Settings

The COVID-19 Infection Prevention and Control Training Resource for Childcare Settings is being relaunched as a web-based interactive digital course. It will be available across multiple devices: laptops, desktops and mobile devices with internet access – enabling managers of early years' childcare settings and childminders to ensure that they and their staff are trained in infection control. This will allow practitioners to access the content as and when they require and undertake this training at a pace that suits them.

Completion of the course including the assessment exercises is certificated.

The content for this training course has been developed by the Childcare Partnerships/Health and Social Care Board (HSCB) in collaboration with the Northern Ireland Social Care Council in line with the Department for Health's (DoH) COVID-19 Guidance for Registered Group Childcare Settings and the DoH COVID-19 Childcare-Guidance for Childminders, and has been endorsed by the Public Health Agency (PHA). The content is subject to ongoing review as knowledge in relation to COVID-19 increases and advice is changed.

The course is available free on the NISCC Learning Zone:
